

FI-F20 Illuminated Keypad with Adjustable Brightness

The Keetronics FI-F20 is an illuminated keypad designed for reliable operation in demanding applications. It features illuminated text and symbols with adjustable brightness control for improved visibility. The integrated keyguard function helps prevent accidental key operation, while its robust key design ensures a minimum lifespan of 1 million operations per key. With USB or UART output options and IP65 protection against dust and water ingress, the FI-F20 offers a practical keypad solution for industrial and specialised control applications.

Specifications :

- Adjustable Illumination: Backlit text and symbols with adjustable brightness control.
- Keyguard Protection: Helps prevent accidental key operation.
- Long Key Life: Minimum 1 million operations per key.
- Ip65 Protection: Protection against dust and water ingress, with USB or UART output options.

Technical Specification :

Illumination	Illuminated Text and Symbols
Brightness Control	Adjustable
Keyguard	Available
Key Life	≥ 1 Million Operations per Key
Output Interface	USB / UART
Protection Rating	Ip65
